

Look, it's a P.A.T. NIGHT class !

SHAPE UP!

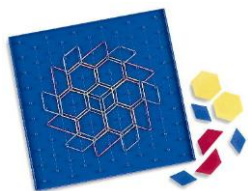

*Learning the Math Concepts of Geometry

When it comes to Math concepts, many students ask the recurring question, "Will I ever use this in real life?" In regards to Geometry, the answer is "YES!" One day, you may need to know:

- * "How much carpet do I need to cover this floor space?" (Area, Perimeter)
- * "How much will this container hold?" (Volume)
- * "What shapes and angles should I use in my painting?" (Shapes, Angles)
- * "How can I build the most effective skateboard ramp?" (Angles and length)
- * "How do I make this basketball shot?" (Angles)
- * "How should I build my dream house?" (perimeter, shapes, area, volume, planes, angles, etc.)

Geometry entails many different skills and concepts throughout all of the grade levels. Come learn how to enhance your Math instruction for Geometry with hands-on learning activities. This workshop will consist of a variety of learning centers that students/parents can independently explore at their own pace. Also, enjoy the "Shaped Snacks" center! ☺

To Register: Go to the home page:
www.odysseyk12.org and pull down the menu under K-5. Then, click, "Parents As Teachers."

Any questions: Call Diane Kelly at 257-0578 Ext. #7263
Email: dkelly@odysseyk12.org

Date/Time: Grades: K-5 (A variety of centers at different grade levels)
Tuesday, April 4, 2017 – 6:00-7:30 p.m.
